Hi Brian, no apologies necessary. Proceed with finalization of the physical and the terrain model.
Thanks

Hi Donald,

Sorry but I have to ask:

Do we have an address where the model will be shipped to? In excess of 3' (w) x 5' (l) x 9" (h), all to accommodate the likely bigger size of the box this will come in.

Also, please confirm that we will proceed before handling issues with Deborah Chang and Rick Gmerkin.

Again I apologize for asking. THANKS,

Brian Takeda

Everyone, making the model is a go. Proceed. Include a label maker. Thanks

Natasha and Donald,

This is FYI - We are locked and loaded for the production of the model and have worked out all details for how to treat the labeling of trails:

- The model maker said the model can work with an off-the-shelf label maker using 12mm black or white labels. We can even specify a Brother or other label making gadget to be provided as part of the model "package."
- Model maker is asking for a schedule so he can queue jobs he has waiting in line. I think he's just trying to reduce uncertainty on his end so we will explain why we can't answer right now.

Let us know about the coordination with Deborah Change and Rick Gmerkin since we should complete this before moving forward so as to eliminate the risk of any surprises for the terrain

model group. We know you have a major volcanic eruption issue right now.

Thank you,

Brian Takeda

Hi Brian,

The model maker is asking if we have an estimated timeline for the project so that they can plan the schedule on their side given the other projects they have/are receiving. Does HDOT have an estimate on when the map will be finalized or when they would like the terrain model to be finished?

Thank-you!

Hi Brian,

Howard Models tested out the labels we sent them, and they have assessed that the labels will work fine for the model. Please see his email for further assessment and an explanation of the attached photos, below.

I have saved the photos in this directory: K:\plan\21718-01 Queen Kaahumanu\07 STIPULATION 15-TERRAIN MODEL\TERRAIN MODEL RENDER\Labels

Regarding equipment, the label maker we have in the office is this [Brother P-touch PTD400AD](#). We used Joanne's, but that model is outdated. There is also an option to buy the [label maker with the portable case](#). I recommend buying the clear laminated 12-mm (0.47") label tape with [black](#) and [white](#) ink; both colors looked nice in the photos Howard Models provided. HDOT may also consider buying a [label cutter blade](#), as it looks like Howard Models had to cut around the lettering a bit.

Please let me know if you need additional information. When do you think the map will be finalized?

Thank-you,

Hi Noelle-

Good News... It looks like those labels will work just fine for the model (see the attached pics). They stick nicely to the slopes and flat areas on our sample fiberglass model, and are also still removable.

They peel off of the model nice and clean, should anyone want to replace or moved them around. We cut the labels down so that there was less "clear" material to have to wrap up, down, and over mountains.

The last photos are of your map image overlaid onto the actual 3D digital terrain with 2x exaggeration.
Even with the exaggeration, the path names fall mostly on flat or gently sloping areas.
You will also have the latitude to put the text label on the flattest, easiest area of the path to apply.

Depending on what the final image ended up looking like, will dictate whether you would print the label "white" or "black."

Thanks,
John

Good Morning Noelle-

The labels have arrived here - thank you.

We will be in touch about testing these.

Thanks,
John
